Housing "Lite" Plus Report Contents

The research includes analysis of census data and trends between 2010 and most current data available.
The **Housing "Lite" Plus Report** provides data on the following area;

Population data is sourced from the U.S. Census and includes total population, segments, male, female, and median age. **Housing data** includes total units, occupied and vacant units, including ages of occupants, bedroom types, home values, rents, building permits, and housing burdens. This will included a sampling of market rate rentals.

Income data includes segmented brackets, median and mean incomes and poverty levels.

Educations data includes population in school from preschool through college.

Race & Ethnicity data include tabulation groups.

Employment and Economy data include labor force, unemployed, mean travel time to work.

Analysis of Data The census data provides a comparison of the population demographics for 2010 through Present, plus a segmented breakdown when applicable. A Net or Effective Demand Analysis by household grow or income segment is provided, just pick one method. This practice is used to spot patterns in data and illustrates changes in the population, housing, and income.

This report can be used to assess current market conditions to determine whether or not to proceed with the development of affordable housing products. This report and its fees can be rolled into a preliminary or full study.

The estimated time to complete the study is business 5 days. **The fee for this report is $650,** payment due with order. Asterhill will deliver to the *Housing Lite Plus Report* in a PDF Format.

I approve and please begin the HL+R
